

Recommendations Child U

- **GP practices must ensure that they have robust procedures for tracking repeated instances of missed appointments and WNB, including for immunisations. This must ensure that persistent patterns of non-attendance are identified, and that relevant information is sought from other agencies to identify if there are grounds for concern. The CCG shall work with GP practices in the area to ensure that these arrangements are in place within 6 months.**
- **BSCP must ensure that all partners include the aim of involving members of the wider family when there are frequent instances of WNB for children under 5 years, and that this is supported, where necessary, through revised policies and training.**
